

Plan Ahead. Be Ahead.

LEADING WITH TECHNOLOGY

RGS Associates helps clients plan ahead for successful project implementation.

But we don't stop with our clients. At RGS, we plan ahead too. We are investing in the future of your business. We know where the land development industry is going. We see where technology can take us. We are there.

AUTODESK CIVIL 3D

Cutting-Edge Technology gives our clients:

The Newest Technology ensuring the most accurate designs before shovels hit the dirt.

An Integrated-Design Team of engineers and landscape architects working for more efficient design dollars.

More accurate changes using Civil 3D and its dynamic engineering models of road, site, sewer and storm drain, and subdivision projects.

An Integrated CAD and GIS solution allowing for easier work with both internal and external engineering and GIS departments or consultants.

New Civil 3D 2006 capabilities mean that any changes made to one part of the design will be automatically propagated throughout the entire project which helps ensure the accuracy of construction documentation.

'With its dynamic design environment,
Civil 3D will change the way we do business.' Jason Stevens - IT Manager
